Tree Sale

Orders must be received by April 1, 2024, along with payment.

Estimated delivery of trees is expected the first week of May. Purchasers are responsible for the planting, care and maintenance of their trees and must adhere to Consumers Energy Guidelines regarding tree placement that will be provided to anyone who places an order. Recommendations can also be viewed here:

<https://arbordayblog.org/treeplanting/need-know-planting-right-tree-right-place/> and

<https://www.consumersenergy.com/company/trees-and-power-lines/planting-smart>.

By submitting this order, I acknowledge that I am responsible for the planting and care of my purchase and agree to adhere to the provided guidelines regarding placement. There is no guarantee or warranty on my purchase.

All orders must be received in our office by 4:00 PM April 1, 2024. Please call 517-625-6155 with any questions.

Tree Planting and Care Tips

Michigan Department of Natural Resources

Planting

- The best seasons to plant a tree are spring and fall.
- Call 811 before digging to have utility lines located and marked. Avoid planting under power lines.
- Dig a saucer-shaped hole as deep as the tree's root ball and three times as wide.
- Break up the sides of the hole so the roots can grow through.
- Set the root ball in the center of the hole, root flare level with the top of the hole or slightly above.
- Cut away any burlap/wrapping. Remove non-biodegradable materials like plastic pots or ties.
- Gently fill the hole with soil and use water to settle it and remove air pockets.
- Add a 3-4" layer of mulch, leaving a 6" bare circle around the trunk to prevent trunk decay.

Care and maintenance

Pruning

- Prune away any dead or broken branches with clean, sharp pruning shears.
- Do not prune healthy branch tips or the tallest, center part of the tree.
- Clip any small twigs, called suckers, growing from the base of the tree.

Staking (optional)

- Drive two stakes into the ground on opposite sides of the tree, 6"-8" outside the root ball.
- Loosely tie the tree to the stakes with a wide strap below the first branch. Do not use wire.
- Remove staking materials after one year.
- Don't stake unless the tree is in a windy area, has a dense crown, or has a trunk larger than 3 inches in diameter.

Watering

- Water frequently and deeply in the first year, especially in hot, dry weather.
- Water the whole area under the canopy of the tree, not just at the base of the trunk.
- Fertilizer is not recommended at planting or for the first three years.

Hole depth =
Height of root ball

Hole width = 3 times the size of root ball
